

1. Ideas

2. Filter

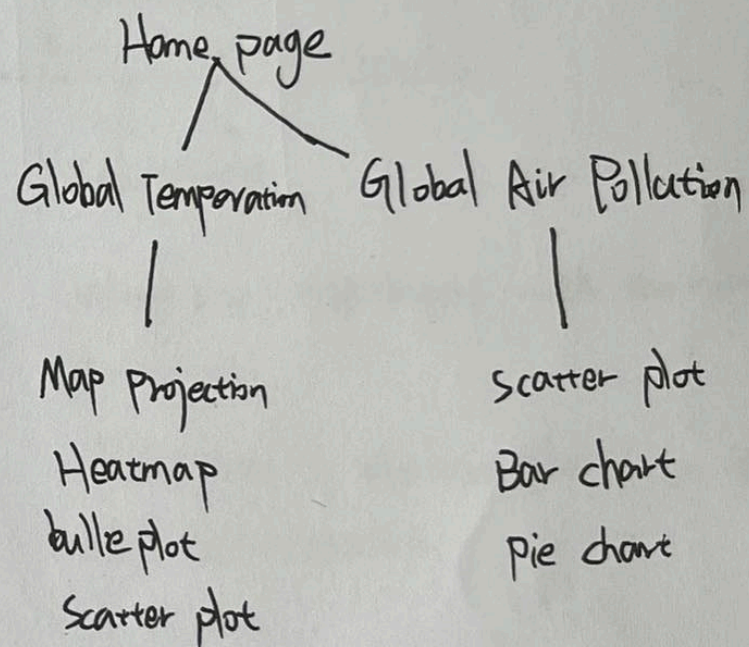

Display data in a multi-dimensional way.

So. ~~use~~ Two visualization methods to show the same data.

3. Categorize

Use three HTML pages to give enough space for the data visualization of the two subjects.

4. combine and Refine

Question.

Are there visualizations well designed?

How to place the style of a web page reasonably?

Layout

Home Page

Visualization of Global Temperature Data and Air Pollution Data

Describe (Describe the context for visualizing global temperature data)
Button

(Jump to the global temperature page)

Describe (Describe the context for visualizing global Air Pollution.)
Button

(Jump to the global Air Pollution.)

Sheet: 2

Task: Design Home Page

Operation

Wrap two sub-containers with the main container.

Description of the data placed in the two subcontainers.

Focus

Data background
Describe the two topics to set the stage for visualization.

Detail

Describe the background

Provide a main page to jump to two different themed visualization web pages.

Make visualization project very organized.

Sheet: 3

Task: Design Global Temperature Data Page

Operation

Container for visualization

select month May

Select month to display data for a different month.

Minimum Temperature

use the slider to see which countries have different temperature.

Focus

Detail

Use buttons and pop-ups to display visualization descriptions.

This saves space and makes the entire page more beautiful.

AQI Bar chart

Ozone AQI scatter plot

Ozone AQI Pie chart

Use the selection bar to interact using the same three visualizations to show the two types of data allows for better comparison.

Layout

Title: Final Design sheet

Author: Aoran Li

Date: 1/10/2024

Sheet: 5

Task:

Operation

(i) The distribution of temperature around the world is shown through map projection.

(i) Scatter plot is an important visualization of Global Air Quality visualization. It can show the AQI values of various countries and their ratings.

Focus

Each page has a button to return to the home page, which is for the convenience of returning to the home page to view other pages.

Use multiple visualization to display data and provide a selection bar for visualization.

Moving the mouse over each visualized data point will display the detailed data of that data point.

Detail

Three web pages, navigation page, Global Temperature Data visualization and Global Air Quality visualization.

The whole project is very well organized.
